

2.Design Zero-shot, One-shot, and Few-shot prompts to generate a 200-word blog on "Applications of Artificial Intelligence in Healthcare."

ZERO-SHOT:

```
from transformers import pipeline
```

```
generator = pipeline("text-generation", model="gpt2")
```

```
prompt = "Write a 200-word blog on Applications of Artificial Intelligence in Healthcare."
```

```
result = generator(
```

prompt,

max_length=250,

```
do_sample=True,
```

temperature=0.7

)

```
print(result[0]["generated_text"])
```

output

ONE-SHOT

from transformers import pipeline

generator = pipeline("text-generation", model="gpt2")

prompt = """

Example:

Topic: Applications of AI in Education

Blog:

Artificial Intelligence is transforming education by enabling personalized learning, automated grading, and virtual tutors.

Now write a 200-word blog on Applications of Artificial Intelligence in Healthcare.

"""

result = generator(prompt, max_length=300)

print(result[0]["generated_text"])

output:

```
dd.py - C:/Users/Dhanyashree/dd.py (3.10.11)
File Edit Format Run Options Window Help
from transformers import pipeline

generator = pipeline("text-generation", model="gpt2")

prompt = """
Example:
Topic: Applications of AI in Education

Blog:
Artificial Intelligence is transforming education by enabling personalized learning, automated grading, and virtual tutors.

Now write a 200-word blog on Applications of Artificial Intelligence in Healthcare.
"""

result = generator(prompt, max_length=300)

print(result[0]["generated_text"])
```

```

Device set to use cpu
Truncation was not explicitly activated but 'max_length' is provided a specific value, please use 'truncation=True' to explicitly truncate examples to max length. Defaulting to 'longest_first' truncation strategy. If you encode pairs of sequences (GLUE-style) with the tokenizer you can select this strategy more precisely by providing a specific strategy to 'truncation'.
Setting 'pad_token_id' to 'eos_token_id':50256 for open-end generation.
Both 'max_new_tokens' (=256) and 'max_length' (=300) seem to have been set. 'max_new_tokens' will take precedence. Please refer to the documentation for more information. (https://huggingface.co/docs/transformers/main/en/main_classes/text_generation)

Example:
Topic: Applications of AI in Education

Blog:
Artificial Intelligence is transforming education by enabling personalized learning, automated grading, and virtual tutors.

Now write a 200-word blog on Applications of Artificial Intelligence in Healthcare.

Don't forget to add a disclaimer:

This post is for educational purposes only. It is not intended to be an educational or political comment, and should not be used to imply endorsement of any specific political or social group or political ideology.

You can contact me with any questions or comments (contact me directly).
>>>
```

FEW-SHOT:

```
from transformers import pipeline
```

```
generator = pipeline("text-generation", model="gpt2")
```

```
prompt = """
```

Example 1:

Applications of AI in Education

AI improves personalized learning, grading, and student engagement.

Example 2:

Applications of AI in Agriculture

AI helps monitor crops, predict yields, and optimize irrigation.

Now write a 200-word blog on Applications of Artificial Intelligence in Healthcare.

```
"""
```

```
result = generator(prompt, max_length=320)
```

```
print(result[0]["generated_text"])
```

output:

```
dd.py - C:/Users/Dhanyashree/dd.py (3.10.11)
File Edit Format Run Options Window Help
from transformers import pipeline

generator = pipeline("text-generation", model="gpt2")

prompt = """
